This ebook is provided for educational and informational purposes only. No part of this publication may be reproduced, distributed, or transmitted in any form without prior written permission, except for brief quotations used in reviews or articles.

A note on the tools listed in this book:

AI tools and their features, pricing, and availability change quickly. Every tool in this book was reviewed for accuracy at the time of writing, but details may shift over time. Always check a tool's official website for its current features and pricing before subscribing. This book does not receive payment from any company mentioned, and no tool placement is sponsored — every recommendation is based on genuine usefulness.

None of the tools listed require a technical background. Where a small learning curve exists, we've said so directly.

[Appendix: Quick Reference — All 100 Tools](#)

Introduction: Your Time Is the Real Currency

Every week has 168 hours in it. After sleep, work, and basic life admin, most people are left with surprisingly little time for the things that actually move their life or business forward — the strategic thinking, the creative work, the deep focus, the rest.

The good news is that a lot of what eats your time isn't important work. It's repetitive work: writing the same kind of email, formatting the same kind of document, editing the same kind of video, answering the same kind of question. This is exactly the kind of work AI tools are good at.

This book is built around one simple idea: you don't need to become an "AI expert" to save serious time. You just need to know which tool to reach for, for which task, and how to use it in the first five minutes.

You don't need 100 tools. You need the right 5 to 10 tools for your work — and this book will help you find them.

Across the next chapters, you'll find 100 real, widely used AI tools, organized into 10 practical categories: writing, research, design, video, social media, productivity, communication, marketing, business operations, and everyday helpers.

Every tool entry follows the same simple format, so you can scan quickly and find what's useful to you:

- What it does — a plain-English explanation, no jargon.
- Time saved — a realistic weekly estimate based on typical use.
- Best for — who gets the most value from this tool.
- Quick tip — one thing to try in your first five minutes.

You don't need to read this book cover to cover. Skim the categories that match your life and work, pick two or three tools that solve a real problem you have right now, and start there. Real time savings come from using a few tools well — not from collecting dozens of apps you never open.

How to Use This Book

This book is designed to be used like a reference guide, not read in one sitting.

Step 1: Identify your biggest time drain

Before opening any chapter, ask yourself: what task eats the most hours in my week that doesn't actually need my personal judgment? Writing emails? Editing video? Scheduling meetings? Making graphics? That answer tells you which chapter to start with.

Step 2: Pick one tool, not ten

It's tempting to try to adopt five new tools in one week. Don't. Pick one tool for your single biggest time drain, use it for a full week, and only then consider adding a second one. Tools stack much better once the first one is a habit.

Step 3: Use the Quick Tip on day one

Every tool entry includes a Quick Tip — a small action you can take in your first few minutes with the tool. These are designed to get you a useful result immediately, so the tool proves its value before you've invested real time learning it.

Step 4: Revisit Chapter 12 for full workflows

Chapter 12 shows how real freelancers, students, marketers, and business owners combine several tools from this book into a simple weekly workflow. If you want a starting combination rather than picking tools one by one, start there.

The 10-Hour Framework: Where the Time Actually Comes From

"10 hours a week" can sound like a marketing number. It isn't — it's a realistic total once you add up small, repeated savings across a normal week. Here's the honest math:

Writing & email: 2–4 hours saved with AI drafting instead of writing from a blank page.

Research & reading: 1–3 hours saved by summarizing instead of reading everything in full.

Design & visuals: 1–3 hours saved by generating instead of building graphics manually.

Meetings & notes: 1–2 hours saved by auto-generated notes instead of manual note-taking.

Repetitive admin: 1–3 hours saved through simple automation of routine tasks.

These add up quickly — and this is a conservative estimate. Many freelancers and small business owners report saving far more once a few tools become habits rather than novelties.

The goal isn't to use AI for everything. It's to remove the friction from the 20% of your work that is repetitive, so you have more time and energy for the 80% that actually requires you.

Chapter 1: Writing & Content Creation

Writing is where most people lose the most time — staring at a blank page, rewriting the same sentence, or fixing grammar mistakes. The tools in this chapter turn a blank page into a first draft in seconds, so you spend your time editing and improving instead of starting from zero.

#1 ChatGPT

What it does: A general-purpose AI chatbot from OpenAI that can write emails, blog posts, captions, outlines, and answer almost any question in plain language.

 **Time saved:** Saves 3–5 hours a week on drafting emails, posts, and everyday writing.

Best for: Anyone who writes regularly — students, freelancers, employees, business owners.

Quick tip: Give it a role ("Act as a marketing copywriter") and a clear goal for much better results.

#2 Claude

What it does: An AI assistant from Anthropic known for long, detailed writing, careful reasoning, and handling long documents well.

 **Time saved:** Saves 2–4 hours a week on reports, summaries, and detailed writing tasks.

Best for: People working with long documents — reports, contracts, research, and detailed plans.

Quick tip: Paste a full document and ask Claude to summarize or restructure it — it handles long text very well.

#3 Google Gemini

What it does: Google's AI assistant, built into Gmail, Docs, and Sheets, that drafts, rewrites, and summarizes right inside the apps you already use.

 **Time saved:** Saves 2–3 hours a week by removing the need to switch between apps.

Best for: Gmail and Google Workspace users who want AI without a new tool to learn.

Quick tip: Use "Help me write" inside Gmail to draft replies in your own tone.

#4 Jasper

What it does: An AI writing platform built for marketing teams, with templates for ads, blog posts, and brand-consistent content.

 **Time saved:** Saves 4–6 hours a week on marketing content production.

Best for: Marketing teams and agencies producing content at scale.

Quick tip: Set up a Brand Voice profile once so every piece of content sounds consistent.

#5 Copy.ai

What it does: An AI copywriting tool focused on short-form content like ads, product descriptions, and social captions.

 **Time saved:** Saves 2–3 hours a week on short marketing copy.

Best for: Ecommerce sellers and small businesses writing product listings and ads.

Quick tip: Use the product description template and paste in your product's key features.

#6 Writesonic

What it does: An AI content tool that writes SEO-friendly blog posts, landing pages, and ads based on keywords you give it.

 **Time saved:** Saves 3–5 hours a week on SEO content writing.

Best for: Bloggers and businesses trying to rank on Google.

Quick tip: Use the Article Writer with a target keyword to get an SEO-structured draft.

#7 Grammarly

What it does: An AI writing assistant that checks grammar, clarity, and tone as you type, in almost any app.

 **Time saved:** Saves 1–2 hours a week on proofreading and editing.

Best for: Everyone — students, professionals, non-native English speakers.

Quick tip: Turn on tone detection so you catch messages that sound too harsh before you send them.

#8 QuillBot

What it does: An AI paraphrasing and summarizing tool that rewrites sentences to be clearer or match a different tone.

 **Time saved:** Saves 1–2 hours a week on rewriting and simplifying text.

Best for: Students and writers who need to rephrase or shorten text quickly.

Quick tip: Use the Summarizer to turn long articles into a few key bullet points.

#9 Wordtune

What it does: An AI rewriting tool that suggests better phrasing for individual sentences, right where you're typing.

 **Time saved:** Saves 1–2 hours a week on polishing emails and messages.

Best for: Anyone who wants their writing to sound more natural and professional.

Quick tip: Use it on your first-draft emails before sending — it often finds a cleaner phrasing.

#10 Sudowrite

What it does: An AI writing partner built specifically for fiction writers, helping brainstorm plot ideas and continue scenes.

 **Time saved:** Saves 3–4 hours a week on brainstorming and getting past writer's block.

Best for: Fiction writers, novelists, and creative storytellers.

Quick tip: Use the "Describe" feature to get sensory detail ideas for a scene you're stuck on.

Chapter 2: Research & Learning

Good decisions start with good information — but reading through ten articles or a 40-page paper takes time you may not have. This chapter covers tools that read, search, and summarize on your behalf, so you get the answer without the hours of digging.

#11 Perplexity AI

What it does: An AI search engine that answers questions directly, with sources, instead of giving you a list of links to click through.

 **Time saved:** Saves 2–4 hours a week on research and fact-finding.

Best for: Anyone who researches topics regularly — students, marketers, journalists.

Quick tip: Turn on "Focus" mode to search only academic papers or only recent news.

#12 Consensus

What it does: An AI search engine built specifically for scientific research papers, pulling findings straight from studies.

 **Time saved:** Saves 3–5 hours a week on academic research.

Best for: Students, researchers, and anyone who needs evidence-based answers.

Quick tip: Ask a yes/no research question and Consensus will show you how many studies agree.

#13 Elicit

What it does: An AI research assistant that finds relevant academic papers and pulls out key findings into a table for you.

 **Time saved:** Saves 4–6 hours a week on literature reviews.

Best for: Graduate students and researchers writing literature reviews.

Quick tip: Use it to compare findings across many papers side by side instead of opening each one.

#14 SciSpace

What it does: An AI tool that explains complex academic papers in plain language and answers questions about them.

 **Time saved:** Saves 2–3 hours a week on understanding dense research papers.

Best for: Students and professionals reading technical or scientific material.

Quick tip: Highlight a confusing paragraph and ask SciSpace to explain it simply.

#15 NotebookLM

What it does: A Google AI tool that turns your own documents, notes, or PDFs into a searchable assistant and even an audio summary.

 **Time saved:** Saves 3–5 hours a week on studying and reviewing your own materials.

Best for: Students studying for exams and professionals organizing research notes.

Quick tip: Upload your lecture notes and ask it to generate a quiz to test yourself.

#16 Glasp

What it does: An AI-powered highlighter and note-taking browser extension that saves and summarizes what you read online.

 **Time saved:** Saves 1–2 hours a week on organizing research notes.

Best for: People who read a lot of articles and want to keep useful notes.

Quick tip: Use the AI summary feature right after highlighting an article to lock in the key points.

#17 TLDR This

What it does: A simple AI tool that condenses long articles or web pages into a short summary in seconds.

 **Time saved:** Saves 1–2 hours a week on reading long articles.

Best for: Busy professionals who need the gist of an article, fast.

Quick tip: Paste a long news article before a meeting to get talking points in seconds.

#18 Speechify

What it does: An AI text-to-speech app that reads articles, PDFs, and books aloud in a natural-sounding voice.

 **Time saved:** Saves 2–4 hours a week by letting you "read" while commuting or exercising.

Best for: Commuters, students, and anyone who learns well by listening.

Quick tip: Speed up the playback to 1.5x once you get used to the voice — you'll get through more content.

#19 DeepL

What it does: An AI translation tool known for producing more natural, accurate translations than most free translators.

 **Time saved:** Saves 1–3 hours a week on translating documents and messages.

Best for: Freelancers and businesses working with international clients.

Quick tip: Use the document upload feature to translate a whole file while keeping its formatting.

#20 Google Translate

What it does: A free AI-powered translation tool that supports text, voice, and camera translation across over 100 languages.

 **Time saved:** Saves 1–2 hours a week on quick translations and international communication.

Best for: Anyone needing fast, free translation for travel or basic communication.

Quick tip: Use the camera feature to instantly translate text in photos, menus, or signs.

Chapter 3: Image & Design

You don't need to be a designer — or hire one for every small graphic — to create professional-looking visuals anymore. These tools generate, edit, and clean up images in seconds, which used to take hours in design software.

#21 Midjourney

What it does: An AI image generator known for producing highly detailed, artistic images from a simple text description.

 **Time saved:** Saves 4–6 hours a week on sourcing or creating custom artwork.

Best for: Creators and marketers who need unique, high-quality visuals.

Quick tip: Add "--ar 16:9" to your prompt to get a wide image, perfect for banners or thumbnails.

#22 DALL·E (in ChatGPT)

What it does: OpenAI's image generator, built into ChatGPT, that creates images directly from a conversation.

 **Time saved:** Saves 2–4 hours a week on quick custom graphics.

Best for: Anyone already using ChatGPT who occasionally needs an image.

Quick tip: Describe the mood and colors you want, not just the subject, for a better result.

#23 Adobe Firefly

What it does: Adobe's AI image generator, built into Photoshop and Illustrator, that also generates images from text.

 **Time saved:** Saves 3–5 hours a week on design tasks like background removal and image fills.

Best for: Designers already using Adobe products.

Quick tip: Use Generative Fill in Photoshop to remove unwanted objects from a photo in seconds.

#24 Canva Magic Studio

What it does: A set of AI tools inside Canva that generate designs, images, and even full presentations from a short prompt.

 **Time saved:** Saves 4–6 hours a week on everyday graphic design.

Best for: Small business owners and social media creators without design skills.

Quick tip: Use Magic Design and upload your own photo — Canva will build a matching layout around it.

#25 Leonardo.Ai

What it does: An AI image generator popular for game assets, product mockups, and stylized artwork with fine control over style.

 **Time saved:** Saves 3–4 hours a week on visual content creation.

Best for: Game developers, product designers, and content creators.

Quick tip: Save your favorite style settings as a preset so future images stay consistent.

#26 Looka

What it does: An AI logo maker that generates a complete brand logo and identity kit based on your business name and style preferences.

 **Time saved:** Saves 5–8 hours (one-time) on branding setup.

Best for: New business owners who need a logo without hiring a designer.

Quick tip: Try several style categories before picking — the options can look very different.

#27 Tailor Brands

What it does: An AI branding tool that creates a logo, business card, and basic brand kit in one guided process.

 **Time saved:** Saves 4–6 hours (one-time) on setting up a new brand identity.

Best for: New entrepreneurs launching a business quickly.

Quick tip: Use the generated brand kit consistently across your website and social pages for a professional look.

#28 Remove.bg

What it does: An AI tool that removes the background from any photo in one click.

 **Time saved:** Saves 1–2 hours a week on product photo editing.

Best for: Ecommerce sellers preparing product photos.

Quick tip: Batch upload multiple photos at once to save even more time.

#29 Potoroom

What it does: An AI photo editor built for product photography — it removes backgrounds and adds clean, studio-style backdrops.

 **Time saved:** Saves 2–3 hours a week on product photo editing.

Best for: Online sellers who photograph products at home.

Quick tip: Use a plain background when shooting the original photo — it makes the AI cutout cleaner.

#30 Krea AI

What it does: A real-time AI image and video generation tool that lets you sketch or type and see results instantly.

 **Time saved:** Saves 2–3 hours a week on rapid visual concepting.

Best for: Designers who want to quickly explore visual ideas.

Quick tip: Use the real-time canvas to sketch a rough shape and watch the AI refine it live.

Chapter 4: Video & Audio

Video used to mean editing software, voiceover recording, and hours of rendering. AI has cut most of that down to a text prompt or a few clicks — including the voice itself.

#31 Runway

What it does: An AI video tool that can generate video clips from text, remove backgrounds, and apply advanced video effects.

 **Time saved:** Saves 5–8 hours a week on video editing and effects.

Best for: Video creators and marketers making short-form video content.

Quick tip: Use Green Screen mode to remove a video background without filming in front of an actual green screen.

#32 Pika

What it does: An AI video generator that creates short video clips from a text prompt or a still image.

 **Time saved:** Saves 3–5 hours a week on creating short video content.

Best for: Social media creators experimenting with AI-generated video.

Quick tip: Start from a still image instead of text for more predictable, controllable results.

#33 Synthesia

What it does: An AI tool that turns a script into a video with a realistic AI presenter speaking it — no camera or actor needed.

 **Time saved:** Saves 5–10 hours a week on training and explainer videos.

Best for: Companies making training videos, tutorials, or product explainers.

Quick tip: Keep sentences short in your script — the AI avatar delivers short lines more naturally.

#34 HeyGen

What it does: An AI video tool similar to Synthesia, known for realistic AI avatars and easy multi-language dubbing.

 **Time saved:** Saves 4–8 hours a week on video production and translation.

Best for: Businesses creating video content for multiple languages or markets.

Quick tip: Use the translation feature to turn one video into five language versions in minutes.

#35 Descript

What it does: A video and podcast editor where you edit the video by editing the text transcript — delete a word, and it removes it from the video too.

 **Time saved:** Saves 5–7 hours a week on video and podcast editing.

Best for: Podcasters and video creators who want editing without complex software.

Quick tip: Use the Studio Sound feature to instantly clean up background noise in your audio.

#36 ElevenLabs

What it does: An AI voice generator that creates extremely realistic voiceovers from text, in many languages and voice styles.

 **Time saved:** Saves 3–5 hours a week on recording and re-recording voiceovers.

Best for: Content creators, podcasters, and video producers needing voiceovers.

Quick tip: Clone your own voice (with consent) so your AI voiceovers still sound like you.

#37 Murf.ai

What it does: An AI voiceover tool with a large library of professional voices, built for presentations and business videos.

 **Time saved:** Saves 2–4 hours a week on voiceover recording.

Best for: Businesses creating training material or presentation voiceovers.

Quick tip: Adjust the pitch and speed slightly per sentence to make the voice sound less robotic.

#38 CapCut AI

What it does: A free video editor with AI features like auto-captions, background removal, and smart cutting for social media videos.

 **Time saved:** Saves 3–5 hours a week on short-form video editing.

Best for: TikTok, Instagram Reels, and YouTube Shorts creators.

Quick tip: Use auto-captions and edit them slightly for accuracy — most viewers watch with sound off.

#39 InVideo AI

What it does: An AI video generator that turns a topic or script into a fully edited video with visuals, music, and voiceover.

 **Time saved:** Saves 4–6 hours a week on video creation from scratch.

Best for: Marketers and creators who want a finished video fast.

Quick tip: Give it a detailed script rather than a single topic line for a more on-target video.

#40 Pictory

What it does: An AI tool that turns long-form content, like blog posts or webinars, into short, shareable video clips.

 **Time saved:** Saves 3–4 hours a week on repurposing content into video.

Best for: Content creators who write blogs and want video versions too.

Quick tip: Paste a blog post URL directly — Pictory will draft a video script and match visuals automatically.

Chapter 5: Social Media & Content Repurposing

Posting consistently is one of the hardest parts of social media — not because it's hard, but because it's repetitive. This chapter is about doing the work once and letting AI turn it into a week's worth of content.

#41 Opus Clip

What it does: An AI tool that automatically finds the most engaging moments in a long video and turns them into short clips.

 **Time saved:** Saves 4–6 hours a week on video repurposing.

Best for: Podcasters and YouTubers who want short clips for social media.

Quick tip: Upload your longest, most talk-heavy videos — Opus Clip performs best when there's plenty to choose from.

#42 Repurpose.io

What it does: An automation tool that takes one piece of content and automatically reposts it, resized, across multiple platforms.

 **Time saved:** Saves 3–5 hours a week on cross-platform posting.

Best for: Creators who post the same content on TikTok, Reels, and Shorts.

Quick tip: Set up the automation once so every new video is repurposed automatically, with no manual work.

#43 Buffer AI Assistant

What it does: A social media scheduling tool with a built-in AI assistant that drafts and improves post captions.

 **Time saved:** Saves 2–3 hours a week on writing and scheduling posts.

Best for: Small businesses managing multiple social media accounts.

Quick tip: Batch-write a week of captions in one sitting, then let Buffer schedule them automatically.

#44 Later

What it does: A visual social media scheduler with AI caption suggestions and best-time-to-post recommendations.

 **Time saved:** Saves 2–4 hours a week on planning and scheduling content.

Best for: Instagram-focused creators and small businesses.

Quick tip: Use the visual content calendar to plan your feed's look before you schedule anything.

#45 Hootsuite OwlyWriter AI

What it does: An AI caption generator built into Hootsuite that writes captions based on your past top-performing posts.

 **Time saved:** Saves 2–3 hours a week on caption writing.

Best for: Social media managers handling several brand accounts.

Quick tip: Ask it to repurpose your best-performing old post into a new caption idea.

#46 Vidy.ai

What it does: An AI tool that automatically clips long videos into short, social-ready highlights, similar to Opus Clip.

 **Time saved:** Saves 3–5 hours a week on video content repurposing.

Best for: Creators turning webinars, podcasts, or streams into short clips.

Quick tip: Use the auto-reframe feature so horizontal video is instantly cropped correctly for vertical platforms.

#47 Beacons AI

What it does: An all-in-one creator tool with AI features for media kits, link-in-bio pages, and brand deal pitches.

 **Time saved:** Saves 2–4 hours a week on creator business admin.

Best for: Influencers and creators managing brand partnerships.

Quick tip: Use the AI media kit generator before pitching a brand — it saves you building one from scratch.

#48 SlidesAI

What it does: An AI tool that turns text or an outline into a designed Google Slides presentation automatically.

 **Time saved:** Saves 2–3 hours a week on building carousel posts or presentations.

Best for: Anyone creating LinkedIn carousels or quick presentations.

Quick tip: Paste your bullet points in first, then let SlidesAI design around your content, not the other way around.

#49 Predis.ai

What it does: An AI tool that generates complete social media posts — image, caption, and hashtags — from just a product link or topic.

 **Time saved:** Saves 3–4 hours a week on ready-to-post social content.

Best for: Small businesses wanting a batch of ready-made posts quickly.

Quick tip: Paste your website URL once — Predis.ai can generate a month of post ideas from your existing content.

#50 Taplio

What it does: An AI writing and scheduling tool built specifically for growing a personal brand on LinkedIn.

 **Time saved:** Saves 3–5 hours a week on LinkedIn content and engagement.

Best for: Professionals and founders building a personal brand on LinkedIn.

Quick tip: Use the post inspiration feed to see what's working for others in your industry right now.

Chapter 6: Productivity & Task Automation

This is the chapter with the biggest hidden time savings — not writing content, but managing tasks, notes, and repetitive digital busywork that quietly eats hours every week.

#51 Notion AI

What it does: An AI assistant built into Notion that summarizes notes, drafts documents, and answers questions about your workspace.

 **Time saved:** Saves 3–5 hours a week on note-taking and document organization.

Best for: Teams and individuals already using Notion for notes and projects.

Quick tip: Ask Notion AI to summarize a long meeting note into an action item list.

#52 ClickUp Brain

What it does: An AI feature inside ClickUp that writes task descriptions, summarizes projects, and answers questions about your work.

 **Time saved:** Saves 3–4 hours a week on project management admin.

Best for: Teams managing multiple projects and deadlines.

Quick tip: Ask it "what's overdue on my plate this week" to get an instant, personalized summary.

#53 Todoist AI Assist

What it does: An AI feature that helps break big tasks into smaller subtasks and suggests due dates.

 **Time saved:** Saves 1–2 hours a week on task planning.

Best for: Individuals managing a personal or work to-do list.

Quick tip: Use it to break down a vague goal like "launch website" into concrete next steps.

#54 Motion

What it does: An AI tool that automatically builds your daily schedule by fitting your tasks and meetings into your calendar for you.

 **Time saved:** Saves 3–5 hours a week on planning and re-planning your day.

Best for: Busy professionals juggling many tasks and meetings.

Quick tip: Let Motion re-schedule your day automatically when a new urgent task comes in, instead of doing it manually.

#55 Reclaim.ai

What it does: An AI calendar assistant that protects time for focused work by automatically scheduling it around your meetings.

 **Time saved:** Saves 2–4 hours a week of otherwise-lost focus time.

Best for: Anyone whose calendar gets overrun by meetings.

Quick tip: Set "Habits" for recurring things like lunch or exercise so Reclaim always protects that time.

#56 Zapier

What it does: An automation tool that connects different apps so an action in one app automatically triggers a task in another.

 **Time saved:** Saves 4–6 hours a week on repetitive manual data entry and app switching.

Best for: Anyone using multiple apps that don't talk to each other.

Quick tip: Start with one simple automation, like saving email attachments to Google Drive automatically.

#57 Make (formerly Integromat)

What it does: A visual automation tool, similar to Zapier, built for more complex, multi-step workflows between apps.

 **Time saved:** Saves 4–7 hours a week on complex repetitive workflows.

Best for: Businesses with more advanced automation needs than Zapier easily handles.

Quick tip: Use the visual flow map to spot exactly where a multi-step automation might break.

#58 n8n

What it does: An open-source automation tool like Zapier and Make, popular with technical users who want more control and lower cost.

 **Time saved:** Saves 4–6 hours a week on custom automations.

Best for: Developers and technical teams who want flexible, self-hosted automation.

Quick tip: Use the free self-hosted version if you're comfortable with basic technical setup — it saves on subscription costs.

#59 Text Blaze

What it does: A tool that lets you create text shortcuts — type a few characters and it expands into a full saved message.

 **Time saved:** Saves 2–3 hours a week on typing repetitive messages and replies.

Best for: Customer support, sales, and anyone sending similar messages often.

Quick tip: Save your five most-repeated email replies as shortcuts this week — it adds up fast.

#60 Magical

What it does: A browser tool that auto-fills forms and repetitive text across websites and web apps.

 **Time saved:** Saves 2–3 hours a week on data entry and form-filling.

Best for: Recruiters, customer support, and sales teams doing repetitive data entry.

Quick tip: Set up templates for your most common data entry tasks, like customer support replies.

Chapter 7: Meetings, Communication & Scheduling

Meetings and email are two of the biggest time drains at work. AI can now sit in your meetings, take the notes, write the follow-up, and clean your inbox — so you can focus on the conversation itself.

#61 Otter.ai

What it does: An AI meeting assistant that joins your calls, transcribes them in real time, and creates a summary with action items.

 **Time saved:** Saves 3–5 hours a week on note-taking and meeting follow-ups.

Best for: Anyone who attends regular meetings or calls.

Quick tip: Ask Otter's chat feature questions about a past meeting instead of scrolling through the transcript.

#62 Fireflies.ai

What it does: An AI notetaker similar to Otter that records, transcribes, and summarizes meetings across Zoom, Google Meet, and Teams.

 **Time saved:** Saves 3–5 hours a week on meeting documentation.

Best for: Sales and customer-facing teams who need call records.

Quick tip: Use it to automatically log call notes into your CRM without typing anything.

#63 Fathom

What it does: A free AI meeting recorder that highlights key moments and instantly generates a summary you can share.

 **Time saved:** Saves 2–4 hours a week on meeting notes and recaps.

Best for: Teams that want a free, simple meeting-notes tool.

Quick tip: Use the highlight feature during the call to mark important moments for the summary.

#64 Calendly

What it does: A scheduling tool that lets others book time on your calendar based on your real availability, without back-and-forth emails.

 **Time saved:** Saves 1–3 hours a week on scheduling coordination.

Best for: Anyone who books calls or meetings with clients or teams.

Quick tip: Set buffer times between meetings so your day doesn't get scheduled back-to-back.

#65 Superhuman

What it does: An AI-powered email client that helps you write, triage, and clear your inbox much faster than standard email apps.

 **Time saved:** Saves 3–4 hours a week on email management.

Best for: Professionals who receive a high volume of email.

Quick tip: Learn a few keyboard shortcuts in your first week — that's where most of the speed comes from.

#66 Shortwave

What it does: An AI email client that automatically summarizes long threads and bundles similar emails together.

 **Time saved:** Saves 2–3 hours a week on reading and organizing email.

Best for: Gmail users who want AI features without switching providers.

Quick tip: Use AI thread summaries on long email chains instead of reading every message.

#67 SaneBox

What it does: An AI email tool that automatically sorts unimportant emails out of your inbox so you only see what matters.

 **Time saved:** Saves 2–3 hours a week on inbox management.

Best for: Anyone drowning in newsletters and low-priority email.

Quick tip: Let it run for a week untouched first — it learns your priorities and improves over time.

#68 Fyxr AI

What it does: An AI assistant that automatically drafts email replies and organizes your inbox based on how you normally respond.

 **Time saved:** Saves 3–5 hours a week on writing email replies.

Best for: Busy professionals who answer similar emails repeatedly.

Quick tip: Review its draft replies for the first few days to help it learn your tone faster.

#69 Slack AI

What it does: AI features built directly into Slack that summarize channels and threads you've missed.

 **Time saved:** Saves 1–2 hours a week catching up on missed conversations.

Best for: Teams using Slack for daily communication.

Quick tip: Use the channel recap feature every Monday to catch up instead of scrolling.

#70 Gemini in Google Workspace

What it does: Google's AI built into Docs, Meet, and Gmail — it can summarize a Google Meet call and draft the follow-up email automatically.

 **Time saved:** Saves 2–4 hours a week on meeting summaries and follow-ups.

Best for: Teams already using Google Workspace for work.

Quick tip: Turn on automatic meeting notes in Google Meet before your next recurring call.

Chapter 8: Marketing & Sales

Marketing and sales involve a lot of research, writing, and follow-up — the exact kind of repetitive, detail-heavy work AI is good at. These tools help you plan campaigns, understand customers, and close deals faster.

#71 HubSpot AI (Breeze)

What it does: AI features built into HubSpot's CRM that draft marketing emails, summarize customer records, and suggest next actions for sales reps.

 **Time saved:** Saves 3–5 hours a week on CRM admin and follow-ups.

Best for: Sales and marketing teams already using HubSpot.

Quick tip: Use it to draft a follow-up email automatically right after logging a sales call.

#72 Surfer SEO

What it does: An AI tool that analyzes top-ranking pages for a keyword and tells you exactly what to include in your content to rank well.

 **Time saved:** Saves 3–4 hours a week on SEO research.

Best for: Bloggers and marketers writing content to rank on Google.

Quick tip: Use the Content Score to check your draft before publishing — aim for the recommended range, not a perfect score.

#73 Semrush AI

What it does: AI features inside the Semrush marketing platform that generate content briefs, keyword ideas, and competitor insights.

 **Time saved:** Saves 3–5 hours a week on marketing research.

Best for: Marketing teams doing SEO and competitor analysis.

Quick tip: Run a competitor's domain through it to quickly see which keywords are driving their traffic.

#74 Frase

What it does: An AI content tool that researches a topic, builds a content brief, and helps you write an SEO-optimized article.

 **Time saved:** Saves 2–4 hours a week on content briefs and research.

Best for: Content writers and SEO teams.

Quick tip: Use the auto-generated outline as your starting structure, then adjust it to add your own expertise.

#75 MarketMuse

What it does: An AI content planning tool that identifies content gaps on your website and suggests what to write next.

 **Time saved:** Saves 2–3 hours a week on content strategy planning.

Best for: Content teams planning a long-term content calendar.

Quick tip: Use the content gap analysis before your next planning meeting to bring data-backed topic ideas.

#76 Klaviyo AI

What it does: AI features built into the Klaviyo email marketing platform that write subject lines, email copy, and segment audiences.

 **Time saved:** Saves 2–4 hours a week on email marketing campaigns.

Best for: Ecommerce businesses running email marketing.

Quick tip: Let it suggest subject lines, then A/B test its top two picks against your own idea.

#77 Gong

What it does: An AI tool that records and analyzes sales calls, highlighting what worked, what didn't, and what to follow up on.

 **Time saved:** Saves 3–5 hours a week on sales call review and coaching.

Best for: Sales teams and sales managers.

Quick tip: Review the AI-flagged moments of a call instead of re-watching the whole recording.

#78 Chorus by ZoomInfo

What it does: An AI conversation intelligence tool, similar to Gong, that analyzes sales and customer calls for insights.

 **Time saved:** Saves 3–4 hours a week on call analysis and reporting.

Best for: Sales teams needing detailed call analytics.

Quick tip: Use its competitor-mention alerts to know exactly when a prospect brings up a competitor.

#79 Salesforce Einstein

What it does: AI features built into Salesforce that predict which leads are most likely to convert and automate routine CRM tasks.

 **Time saved:** Saves 2–4 hours a week on lead prioritization and CRM admin.

Best for: Sales teams already using Salesforce.

Quick tip: Use lead scoring to focus your calls on the highest-probability leads first each day.

#80 AdCreative.ai

What it does: An AI tool that generates ready-to-run ad creatives — images and copy — optimized for platforms like Facebook and Google Ads.

 **Time saved:** Saves 3–4 hours a week on ad creative production.

Best for: Businesses running paid advertising campaigns.

Quick tip: Generate multiple ad variations at once and let performance data tell you which one to scale.

Chapter 9: Ecommerce & Business Operations

Running a business means a constant stream of admin — customer questions, invoices, forms, and back-office work. This chapter is about tools that quietly keep the business running while you focus on growth.

#81 Shopify Magic

What it does: AI features built directly into Shopify that write product descriptions and respond to common customer questions.

 **Time saved:** Saves 3–5 hours a week on product listing and customer service.

Best for: Shopify store owners.

Quick tip: Use it to generate product descriptions in bulk, then lightly edit each for your brand voice.

#82 Octane AI

What it does: An AI tool that builds interactive product quizzes to help customers find the right product on your store.

 **Time saved:** Saves 2–3 hours a week on customer support and product guidance.

Best for: Ecommerce stores with multiple product variations.

Quick tip: Use quiz results to also build targeted email segments for future marketing.

#83 Privy

What it does: An AI-assisted tool for building pop-ups, email capture forms, and on-site campaigns for ecommerce stores.

 **Time saved:** Saves 1–3 hours a week on running on-site promotions.

Best for: Small ecommerce businesses growing their email list.

Quick tip: Use exit-intent pop-ups to capture visitors who are about to leave without buying.

#84 Zendesk AI

What it does: AI features inside Zendesk that draft support replies, summarize tickets, and detect customer sentiment automatically.

 **Time saved:** Saves 4–6 hours a week on customer support tickets.

Best for: Customer support teams handling a high volume of tickets.

Quick tip: Let AI draft the reply first, then review and personalize before sending — it's faster than starting blank.

#85 Intercom Fin AI

What it does: An AI customer support agent that can answer customer questions directly, using your help center content as its knowledge base.

 **Time saved:** Saves 5–8 hours a week on first-line customer support.

Best for: Businesses that want to automate common customer questions.

Quick tip: Keep your help center articles up to date — the AI's answers are only as good as that content.

#86 QuickBooks AI

What it does: AI features inside QuickBooks that categorize expenses automatically and flag unusual transactions.

 **Time saved:** Saves 2–3 hours a week on bookkeeping.

Best for: Small business owners managing their own books.

Quick tip: Review AI-categorized transactions weekly rather than monthly to catch errors early.

#87 Xero

What it does: Cloud accounting software with AI features that predict cash flow and automatically match bank transactions.

 **Time saved:** Saves 2–4 hours a week on accounting and reconciliation.

Best for: Small businesses and freelancers managing finances.

Quick tip: Connect your bank feed directly so transaction matching happens automatically, not manually.

#88 Bill.com

What it does: An AI-assisted invoicing and bill payment platform that automates approval workflows and payment reminders.

 **Time saved:** Saves 2–3 hours a week on invoicing and payments.

Best for: Small businesses managing vendor payments and invoicing.

Quick tip: Set up approval workflows once so recurring bills don't need manual sign-off every time.

#89 Typeform AI

What it does: An AI-assisted form builder that helps you write better survey and form questions, and summarizes responses.

 **Time saved:** Saves 1–2 hours a week on building and analyzing forms.

Best for: Businesses collecting customer feedback or leads.

Quick tip: Ask the AI summary feature to highlight the most common theme in open-text responses.

#90 Airtable AI

What it does: AI features built into Airtable that categorize data, summarize records, and generate content directly inside your database.

 **Time saved:** Saves 2–4 hours a week on data organization and reporting.

Best for: Teams using Airtable to manage projects, inventory, or content.

Quick tip: Use it to auto-summarize a long list of customer feedback into key themes.

Chapter 10: Presentations, No-Code & Everyday Helpers

This last chapter is a mix — tools that don't fit neatly into one category but still save real time every week, from building a presentation to automating your browser to getting quick help with everyday office work.

#91 Gamma

What it does: An AI tool that turns a topic or outline into a fully designed presentation, document, or webpage in minutes.

 **Time saved:** Saves 4–6 hours a week on building presentations.

Best for: Anyone who regularly builds slide decks or pitch documents.

Quick tip: Paste in bullet points instead of full sentences — Gamma designs around short, punchy text best.

#92 Tome

What it does: An AI presentation tool that generates narrative-driven slide decks, often used for pitches and story-based presentations.

 **Time saved:** Saves 3–5 hours a week on presentation design.

Best for: Startups and teams creating investor or sales pitches.

Quick tip: Use it to generate a first draft fast, then rewrite the narrative in your own voice.

#93 Beautiful.ai

What it does: An AI presentation tool that automatically adjusts your slide design as you add content, keeping it looking professional.

 **Time saved:** Saves 2–4 hours a week on slide formatting and design.

Best for: Professionals who present often but don't want to fuss with design.

Quick tip: Use a Smart Slide template and just focus on your words — the layout adjusts automatically.

#94 Coda AI

What it does: AI features built into Coda, a flexible docs-and-database tool, that draft content and automate document workflows.

 **Time saved:** Saves 2–4 hours a week on document and workflow management.

Best for: Teams using Coda as an all-in-one workspace.

Quick tip: Use it to auto-generate a status update summary from your project tracker table.

#95 Bardeen

What it does: An AI browser automation tool that automates repetitive web tasks, like scraping data or moving information between web apps.

 **Time saved:** Saves 3–5 hours a week on repetitive browser-based tasks.

Best for: Sales, recruiting, and operations professionals doing web-based research.

Quick tip: Use a pre-built playbook first before building your own automation from scratch.

#96 UiPath

What it does: A robotic process automation (RPA) platform with AI features that automate repetitive, rules-based office tasks like data entry.

 **Time saved:** Saves 5–10 hours a week on high-volume repetitive tasks.

Best for: Larger businesses with repetitive back-office processes.

Quick tip: Start automating your single most repetitive task first to prove the value before scaling up.

#97 Rewind AI

What it does: An AI tool that records and indexes everything you've seen or said on your computer, so you can search your own digital history.

 **Time saved:** Saves 1–3 hours a week on finding things you saw or discussed before.

Best for: People who often need to recall something they saw days ago.

Quick tip: Use the search bar to find that one detail from a meeting last week instead of digging through notes.

#98 Mem AI

What it does: An AI note-taking app that automatically organizes and connects your notes, so you spend less time filing information.

 **Time saved:** Saves 2–3 hours a week on organizing notes and information.

Best for: People who take a lot of notes and want them auto-organized.

Quick tip: Just write — let the AI handle tagging and organizing instead of doing it manually.

#99 Hemingway Editor

What it does: A writing tool (with AI-assisted suggestions) that flags overly complex sentences and suggests simpler, clearer phrasing.

 **Time saved:** Saves 1–2 hours a week on editing for clarity.

Best for: Anyone who wants their writing to be easier to read.

Quick tip: Aim to clear all the red (very hard to read) sentence highlights before publishing.

#100 Microsoft Copilot

What it does: Microsoft's AI assistant built into Word, Excel, PowerPoint, and Outlook, helping you draft, analyze, and summarize inside those apps.

 **Time saved:** Saves 3–5 hours a week on everyday office document work.

Best for: Professionals who work daily in Microsoft Office apps.

Quick tip: In Excel, ask Copilot to explain a formula in plain English instead of decoding it yourself.

Chapter 11: Building Your Own AI Toolkit

Reading about 100 tools is one thing — combining a handful of them into a real weekly workflow is what actually saves the hours. Here are five example toolkits for common situations. Use them as a starting point, then adjust based on what you actually do each week.

The Freelancer

Goal: spend less time on admin and proposals, more time on billable work.

- ChatGPT or Claude — draft client proposals and emails in minutes, not an hour.
- Calendly — let clients book calls without the back-and-forth.
- Grammarly — proofread client-facing messages before sending.
- QuickBooks AI — keep expenses categorized without a monthly cleanup session.
- Otter.ai — record client calls so you never miss a requirement.

The Student

Goal: study more efficiently and understand material faster, not cut corners on learning.

- NotebookLM — turn lecture notes into a searchable study assistant and self-quiz.
- Perplexity AI — get sourced, direct answers instead of digging through search results.
- QuillBot — summarize long readings into key points before deep-reading them.
- Speechify — listen to readings during commutes or workouts.
- Grammarly — polish essays and assignments before submitting.

The Social Media Creator

Goal: post consistently without spending the whole week producing content.

- CapCut AI — edit short-form video fast, with auto-captions.
- Opus Clip — turn one long video into a week of short clips.
- Canva Magic Studio — design graphics and thumbnails in minutes.
- Buffer AI Assistant — write captions and schedule a week of posts in one sitting.
- ElevenLabs — add voiceovers without recording and re-recording.

The Small Business / Ecommerce Owner

Goal: run day-to-day operations without hiring extra help too early.

- Shopify Magic — write product descriptions in bulk.
- Potoroom — clean up product photos without a studio.

- Klaviyo AI — run email marketing campaigns without a dedicated copywriter.
- Zendesk AI or Intercom Fin — handle common customer questions automatically.
- Zapier — connect your store, inbox, and spreadsheets so data moves without manual entry.

The Employee / Marketer

Goal: get through meetings, reports, and daily communication faster.

- Microsoft Copilot or Gemini — draft reports and analyze spreadsheets faster.
- Otter.ai or Fireflies.ai — auto-generate meeting notes and action items.
- Notion AI — organize and summarize project documentation.
- Gamma — build a presentation from an outline in minutes.
- Reclaim.ai — protect real focus time on an otherwise meeting-packed calendar.

Chapter 12: Your 30-Day Getting Started Plan

Adopting AI tools works best gradually. Trying to change every habit in one week usually leads to abandoning all of it by week two. Instead, follow this simple 30-day plan.

Week 1: Pick one tool for your biggest time drain

- Identify the single task that eats the most hours in your week.
- Choose one tool from the matching chapter.
- Use it for every relevant task this week — no exceptions, to build the habit.

Week 2: Add one communication or organization tool

- Add a meeting notetaker, email tool, or task manager from Chapters 6–7.
- Let it run in the background — most of these tools improve the more you use them.

Week 3: Add one creative or content tool

- If you create content, add a writing, design, or video tool from Chapters 1–5.
- Use the Quick Tip from that tool's entry to get a fast first win.

Week 4: Automate one repetitive process end-to-end

- Pick one repetitive multi-step task and connect it using Zapier or Make.
- Review your first three weeks: which tools actually saved you time?
- Drop anything you haven't used — a tool only saves time if you actually open it.

By the end of 30 days, you'll have a small, working AI toolkit built around your real habits — not a list of 100 apps you never touch. That's the actual goal of this book.

Conclusion: Start Small, Stay Consistent

You've now seen 100 AI tools covering nearly every kind of repetitive work — writing, research, design, video, social media, productivity, communication, marketing, operations, and more.

The biggest mistake people make with AI tools isn't picking the wrong one — it's trying to adopt too many at once and giving up before any of them become a habit. The people who genuinely save 10 hours a week aren't using all 100 tools in this book. They're using 5 to 10 of them, consistently, as part of how they already work.

Start with the one task that frustrates you the most this week. Pick one tool. Use its Quick Tip today. Then come back to this book next week for the next one.

The goal was never to use more tools. It was always to buy back your time — for the work, and the life, that actually needs you.

Thank you for reading. Here's to getting your hours back.

Appendix: Quick Reference — All 100 Tools

Use this table to scan every tool in the book at a glance. Turn to the matching chapter for the full write-up, time-saved estimate, and quick-start tip.

#	Tool	Category	Best For
1	ChatGPT	Writing & Content Creation	Anyone who writes regularly — students, freelancers, employees, business owners
2	Claude	Writing & Content Creation	People working with long documents — reports, contracts, research, and detailed plans
3	Google Gemini	Writing & Content Creation	Gmail and Google Workspace users who want AI without a new tool to learn
4	Jasper	Writing & Content Creation	Marketing teams and agencies producing content at scale
5	Copy.ai	Writing & Content Creation	Ecommerce sellers and small businesses writing product listings and ads
6	Writesonic	Writing & Content Creation	Bloggers and businesses trying to rank on Google
7	Grammarly	Writing & Content Creation	Everyone — students, professionals, non-native English speakers
8	QuillBot	Writing & Content Creation	Students and writers who need to rephrase or shorten text quickly
9	Wordtune	Writing & Content Creation	Anyone who wants their writing to sound more natural and professional
10	Sudowrite	Writing & Content Creation	Fiction writers, novelists, and creative storytellers
11	Perplexity AI	Research & Learning	Anyone who researches topics regularly — students, marketers, journalists
12	Consensus	Research & Learning	Students, researchers, and anyone who needs evidence-based answers
13	Elicit	Research & Learning	Graduate students and researchers writing literature reviews
14	SciSpace	Research & Learning	Students and professionals reading technical or scientific material
15	NotebookLM	Research & Learning	Students studying for exams and professionals organizing research notes
16	Glasp	Research & Learning	People who read a lot of articles and want to keep useful notes
17	TLDR This	Research & Learning	Busy professionals who need the gist of an article, fast
18	Speechify	Research & Learning	Commuters, students, and anyone who learns well by listening
19	DeepL	Research & Learning	Freelancers and businesses working with international clients
20	Google Translate	Research & Learning	Anyone needing fast, free translation for travel or basic communication
21	Midjourney	Image & Design	Creators and marketers who need unique,

			high-quality visuals
22	DALL-E (in ChatGPT)	Image & Design	Anyone already using ChatGPT who occasionally needs an image
23	Adobe Firefly	Image & Design	Designers already using Adobe products
24	Canva Magic Studio	Image & Design	Small business owners and social media creators without design skills
25	Leonardo.Ai	Image & Design	Game developers, product designers, and content creators
26	Looka	Image & Design	New business owners who need a logo without hiring a designer
27	Tailor Brands	Image & Design	New entrepreneurs launching a business quickly
28	Remove.bg	Image & Design	Ecommerce sellers preparing product photos
29	Photoroom	Image & Design	Online sellers who photograph products at home
30	Krea AI	Image & Design	Designers who want to quickly explore visual ideas
31	Runway	Video & Audio	Video creators and marketers making short-form video content
32	Pika	Video & Audio	Social media creators experimenting with AI-generated video
33	Synthesia	Video & Audio	Companies making training videos, tutorials, or product explainers
34	HeyGen	Video & Audio	Businesses creating video content for multiple languages or markets
35	Descript	Video & Audio	Podcasters and video creators who want editing without complex software
36	ElevenLabs	Video & Audio	Content creators, podcasters, and video producers needing voiceovers
37	Murf.ai	Video & Audio	Businesses creating training material or presentation voiceovers
38	CapCut AI	Video & Audio	TikTok, Instagram Reels, and YouTube Shorts creators
39	InVideo AI	Video & Audio	Marketers and creators who want a finished video fast
40	Pictory	Video & Audio	Content creators who write blogs and want video versions too
41	Opus Clip	Social Media & Content Repurposing	Podcasters and YouTubers who want short clips for social media
42	Repurpose.io	Social Media & Content Repurposing	Creators who post the same content on TikTok, Reels, and Shorts
43	Buffer AI Assistant	Social Media & Content Repurposing	Small businesses managing multiple social media accounts
44	Later	Social Media & Content Repurposing	Instagram-focused creators and small businesses
45	Hootsuite OwlyWriter AI	Social Media & Content Repurposing	Social media managers handling several brand accounts

46	Vidyo.ai	Social Media & Content Repurposing	Creators turning webinars, podcasts, or streams into short clips
47	Beacons AI	Social Media & Content Repurposing	Influencers and creators managing brand partnerships
48	SlidesAI	Social Media & Content Repurposing	Anyone creating LinkedIn carousels or quick presentations
49	Predis.ai	Social Media & Content Repurposing	Small businesses wanting a batch of ready-made posts quickly
50	Taplio	Social Media & Content Repurposing	Professionals and founders building a personal brand on LinkedIn
51	Notion AI	Productivity & Task Automation	Teams and individuals already using Notion for notes and projects
52	ClickUp Brain	Productivity & Task Automation	Teams managing multiple projects and deadlines
53	Todoist AI Assist	Productivity & Task Automation	Individuals managing a personal or work to-do list
54	Motion	Productivity & Task Automation	Busy professionals juggling many tasks and meetings
55	Reclaim.ai	Productivity & Task Automation	Anyone whose calendar gets overrun by meetings
56	Zapier	Productivity & Task Automation	Anyone using multiple apps that don't talk to each other
57	Make (formerly Integromat)	Productivity & Task Automation	Businesses with more advanced automation needs than Zapier easily handles
58	n8n	Productivity & Task Automation	Developers and technical teams who want flexible, self-hosted automation
59	Text Blaze	Productivity & Task Automation	Customer support, sales, and anyone sending similar messages often
60	Magical	Productivity & Task Automation	Recruiters, customer support, and sales teams doing repetitive data entry
61	Otter.ai	Meetings, Communication & Scheduling	Anyone who attends regular meetings or calls
62	Fireflies.ai	Meetings, Communication & Scheduling	Sales and customer-facing teams who need call records
63	Fathom	Meetings, Communication & Scheduling	Teams that want a free, simple meeting-notes tool
64	Calendly	Meetings, Communication & Scheduling	Anyone who books calls or meetings with clients or teams
65	Superhuman	Meetings, Communication & Scheduling	Professionals who receive a high volume of email
66	Shortwave	Meetings, Communication & Scheduling	Gmail users who want AI features without switching providers
67	SaneBox	Meetings, Communication & Scheduling	Anyone drowning in newsletters and low-priority email
68	Fyxr AI	Meetings, Communication & Scheduling	Busy professionals who answer similar emails repeatedly
69	Slack AI	Meetings, Communication &	Teams using Slack for daily communication

		Scheduling	
70	Gemini in Google Workspace	Meetings, Communication & Scheduling	Teams already using Google Workspace for work
71	HubSpot AI (Breeze)	Marketing & Sales	Sales and marketing teams already using HubSpot
72	Surfer SEO	Marketing & Sales	Bloggers and marketers writing content to rank on Google
73	Semrush AI	Marketing & Sales	Marketing teams doing SEO and competitor analysis
74	Frase	Marketing & Sales	Content writers and SEO teams
75	MarketMuse	Marketing & Sales	Content teams planning a long-term content calendar
76	Klaviyo AI	Marketing & Sales	Ecommerce businesses running email marketing
77	Gong	Marketing & Sales	Sales teams and sales managers
78	Chorus by ZoomInfo	Marketing & Sales	Sales teams needing detailed call analytics
79	Salesforce Einstein	Marketing & Sales	Sales teams already using Salesforce
80	AdCreative.ai	Marketing & Sales	Businesses running paid advertising campaigns
81	Shopify Magic	Ecommerce & Business Operations	Shopify store owners
82	Octane AI	Ecommerce & Business Operations	Ecommerce stores with multiple product variations
83	Privy	Ecommerce & Business Operations	Small ecommerce businesses growing their email list
84	Zendesk AI	Ecommerce & Business Operations	Customer support teams handling a high volume of tickets
85	Intercom Fin AI	Ecommerce & Business Operations	Businesses that want to automate common customer questions
86	QuickBooks AI	Ecommerce & Business Operations	Small business owners managing their own books
87	Xero	Ecommerce & Business Operations	Small businesses and freelancers managing finances
88	Bill.com	Ecommerce & Business Operations	Small businesses managing vendor payments and invoicing
89	Typeform AI	Ecommerce & Business Operations	Businesses collecting customer feedback or leads
90	Airtable AI	Ecommerce & Business Operations	Teams using Airtable to manage projects, inventory, or content
91	Gamma	Presentations, No-Code & Everyday Helpers	Anyone who regularly builds slide decks or pitch documents
92	Tome	Presentations, No-Code & Everyday Helpers	Startups and teams creating investor or sales pitches
93	Beautiful.ai	Presentations, No-Code & Everyday Helpers	Professionals who present often but don't want to fuss with design
94	Coda AI	Presentations, No-Code & Everyday Helpers	Teams using Coda as an all-in-one workspace

95	Bardeen	Presentations, No-Code & Everyday Helpers	Sales, recruiting, and operations professionals doing web-based research
96	UiPath	Presentations, No-Code & Everyday Helpers	Larger businesses with repetitive back-office processes
97	Rewind AI	Presentations, No-Code & Everyday Helpers	People who often need to recall something they saw days ago
98	Mem AI	Presentations, No-Code & Everyday Helpers	People who take a lot of notes and want them auto-organized
99	Hemingway Editor	Presentations, No-Code & Everyday Helpers	Anyone who wants their writing to be easier to read
100	Microsoft Copilot	Presentations, No-Code & Everyday Helpers	Professionals who work daily in Microsoft Office apps
